Art Unit: 2818

## **DETAILED ACTION**

### Election/Restrictions

Applicant's election without traverse of Group I claims 1-6 in the reply filed on February 17, 2006 is acknowledged.

## PRIOR ART REJECTIONS

# **Statutory Basis**

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

# The Rejections

Claims 1-2 and 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasakuri et al. (JP2002-134895).

Sasakuri discloses a solder bump apparatus with

(1); (4) a print mask used to form bumps on barrier metal layers of a wafer comprising a plurality of elongated perforations disposed in linear arrangement for applying a paste via the perforations onto an object of printing,

Art Unit: 2818

wherein each of said perforation includes an edge disposed along the longitudinal direction, said edge being inclined with respect to the direction perpendicular to the direction of arranging the perforations (see drawings 2, 3 and 6);

- (2) wherein the edge of said perforation disposed along the longitudinal direction thereof is substantially straight (see drawing 3);
- (5) wherein said perforations are disposed in a plurality of rows and the density of said perforations is set individually for each row (see drawing 3);
- (6) wherein the rows of said perforations are disposed substantially in parallel to each other (see drawing 3).

#### PRIOR ART REJECTIONS

## **Statutory Basis**

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

## The Rejections

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sasakuri et al. (JP2002-134895).

Application/Control Number: 10/786,890

Art Unit: 2818

Sasakuri teaches everything above except for wherein the edge disposed along the longitudinal direction of said perforations is inclined by an angle from 5 to 45° from the direction perpendicular to the direction of arranging said perforations. However, wherein the edge disposed along the longitudinal direction of said perforations is inclined by an angle from 5 to 45° from the direction perpendicular to the direction of arranging said perforations being within the range is considered to be obvious. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify wherein the edge disposed along the longitudinal direction of said perforations is inclined by an angle from 5 to 45° from the direction perpendicular to the direction of arranging said perforations of Sasakuri 's device within the range as claimed for the purpose of providing for reduced power consumption and increase operational speed, and it also has been held that where the general conditions of a claim are disclosed in the prior ad, discovering the optimum or workable ranges involves only routine skill in the art and it is noted that the applicant does not disclose criticality in the ranges claimed. In re Aller, 105 USPQ 233 (see MPEP j 2144.05).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong A. Luu whose telephone number is (571) 272-1902. The examiner can normally be reached on M-F (6:15-2:45).

Application/Control Number: 10/786,890 Page 5

Art Unit: 2818

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David C. Nelms can be reached on (571) 272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
